Rain Gardens and More

• The Rain Garden program for Kitsap County may reimburse landowners of Unincorporated Kitsap County for adding green stormwater practices to their existing structures.

• Green Stormwater Solutions include: Rain Gardens, Soaker Trenches, Permeable Paving, Cisterns, Rain Barrels, and Landscape Modifications (Lawn Removal w. native planting)

• The program may reimburse landowners for costs for materials and contractor labor, not to exceed $1000.00 per practice.

• The Rain Garden Program reimbursement process has several steps:
  1) Landowner fills out Rain Garden Program application and schedules a site visit with KCD
  2) KCD evaluates the application using a matrix of criteria to determine if site meets prioritization criteria
  3) If project is approved, Landowner signs and dates the Rain Garden Program Agreements (Cooperator and Assistance agreements). Contractor and/or material receipts must be dated after this date.
  4) KCD can contribute technical assistance for design or construction. KCD design specifications must be followed to receive reimbursement, even if using a contractor.
  5) Landowner completes project, saves all original receipts and schedules KCD to inspect the finished practice and get completion signatures.
  6) Check is issued to landowner
